

Product designer and hands-on AI product builder working at the intersection of interaction design, developer workflows, and production systems. I take ambiguous operational problems from discovery through high-fidelity product design, implementation, deployment, and iteration with real users.

EXPERIENCE

- JUL 2026 – NOW

Head of Product / Koi Ventures

Buenos Aires, Argentina · Hybrid

 - Lead end-to-end development of a digital platform in a regulated healthcare environment: product strategy, operational and regulatory discovery, MVP definition, delivery planning, and client partnership.
 - Coordinate product and technology work across complex dependencies, external integrations, and launch readiness while translating business constraints into clear product decisions.
- JAN – JUL 2026

AI Agent Engineer / Ninjo

Buenos Aires, Argentina · Hybrid

 - Owned production conversational agents across WhatsApp and Instagram, spanning prompt architecture, SDK configuration, deployment, monitoring, and incident response.
 - Built regression suites, cross-agent audits, deployment checks, voice-similarity scoring, and contact lifecycle tooling for a fleet of 30 to 36 active agents.
- JUL 2025 – JAN 2026

Management Consultant Analyst / Accenture

Buenos Aires, Argentina · Hybrid

 - Analyzed complex client problems and worked across teams to shape practical transformation and process-improvement initiatives.
- MAR 2023 – JUL 2025

UX Lead and Front-end Developer / Koi Ventures

Buenos Aires, Argentina

 - Led UX/UI from research and high-fidelity prototypes through front-end implementation, combining product strategy with code to ship usable digital products.

SELECTED PRODUCT WORK

- Kai / AI operating systems for real businesses

 - Designing an approval-first product model for agents that connect authorized company context, workflows, and existing systems while keeping humans accountable for consequential actions.
 - Turned a file-based operating model into reusable interaction patterns for knowledge, actions, permissions, and explainable agent outputs.
- Koi ERP / Ledger / Financial operations product

 - Designed and shipped a financial reporting and agent interface over operational data: six product surfaces, responsive behavior, production QA, and a Sheet-to-Postgres read mirror with transactional sync and fallback behavior.
 - Improved trust in AI interactions through progressive status, generated UI blocks, deterministic financial insight, and clear recovery states.
- Diezypunto / B2B commerce operations platform

 - Evolved the customer portal and admin experience through a shared design system, responsive workflows, accessible form conventions, and AI-assisted product discovery.

EDUCATION AND SKILLS

- Universidad de San Andrés

Digital Business · Business Administration and Management

2020 — Jul 2024
- Capabilities

Product design, interaction design, design systems, user research, TypeScript, React, Next.js, Python, FastAPI, LLM APIs, agent workflows, tool use, Vercel, Figma, Git.
